

LitePOWER®

60KW Ford Van Generator

Our second “stealth generator” offers an economical package for smaller jobs utilizing readily available vehicles. We marry a full-featured **LitePOWER® 60kw Generator** with a **Ford E-350** van to give you 500 amps (in single or three phase) of **Movie Quiet®** power for your production needs.

We are able to do this because of the creation of our LitePOWER® 60kw Camera Car Generator with the “Down Draft” radiator configuration. It fits perfectly inside of a stock Ford E350 Van. It can also be used with Chevrolet, GMC or Dodge vans.

Air intake is through the rear windows and an inlet in the floor. Air exhaust is through the floor in the rear of the van over the rear axle so that no holes need to be cut into the roof.

The **LitePOWER® 60kw Ford Van Generator** operates with the doors closed for inconspicuous operation and is unbelievably quiet. Cables go down through the floor and the control panel can be viewed through the side door.

Removable doors and “single side service” make maintenance easy.

All routine maintenance can be performed through the side and rear doors while standing on the ground. A separate 60-gallon, aluminum fuel tank is mounted inside with the filler on the street side, same as the truck tank.

Specifications, operation and maintenance information are the same as the LitePOWER® 60kw Generator and can be viewed at www.litepower.com. Information, pricing and delivery information is available at **800 474-8111**.
